

MailArc

About MailArc

MailArc is a message archiver for the Psion 5mx Email program. It enables received and sent emails and SMS messages to be stored in plain text files, for archiving or for subsequent import into the Psion Data application.

MailArc is the first application to actually scan the message store on the Psion and decode the format of the files therein. It is fast, efficient and user-friendly.

Please note that MailArc has been designed by inspection of the files produced by the Email application on the Psion Series 5mx. Psion have not published any documentation about this, and therefore compatibility with any other system (such as the Psion Series 5 and Message Suite) cannot be guaranteed.

Revision History

08/04/02 - version 1.00 beta released.

12/04/02 - version 1.01 beta released. This fixes 2 bugs, one of which would cause MailArc to crash on encountering a file with an attachment, and the other of which would cause an "Invalid Arguments" error on occasional files. It is recommended that this version is installed by anyone who downloaded version 1.0 beta.

18/04/02 - version 1.02 beta released. This adds compatibility with the Revo, Revo+ and Series 7 machines, as well as the Series 5mx. There are no bug fixes in this release, so Series 5 owners do not need to upgrade.

24/04/02 - version 1.03 beta released. This allows the application to work correctly when installed on drive E: of a Series 7, and also allows a mail store on the E: drive to be read. There are no bug fixes in this release, so Series 5 and Revo owners do not need to upgrade.

24/05/02 - version 1.04 beta released. Minor code optimisations - no bug fixes.
